State of Montana Department of Labor and Industry

Helena, Montana, November 30, 1916.

The Honorable S. V. Stewart, Governor of Montana,

Helena, Montana.

Sir:

I have the honor to submit herewith, as provided by Chapter 55, Session Laws of 1913, the second report of the Department of Labor and Industry, covering the biennial period ended November 30, 1916.

The two years which have elapsed since the preceding biennial report was issued are in many respects without parallel in the history of the state. This statement is based upon the unusual and widespread improvement in business and industrial conditions, opportunity for employment, better copper prices with increased wages for the miners, prosperity of the farmers, development of our latent resources, and the general and material progress which has been made in Montana during the past two years.

This is in direct contrast to the situation which prevailed at the close of the last biennal period. The revolt of the Butte miners from the Western Federation, with its attendant rioting and destruction of property, necessitating the sending into Butte of state troops to quell the disturbance, had affected business seriously in many of the principal industrial centers of the state. Stagnation in business was followed by a further depression because of the unexpected European war, which broke out August 1, 1914, causing additional complications in an already unfortunate situation. Most of the mining companies in the Butte district ceased operations within a fortnight after hostilities commenced. The closing of the big smelters at Anaconda, Great Falls and

other subsidiary plants of the Anaconda company followed, throwing thousands of men out of remunerative employment. The period from August 1, 1914, to February 1, 1915, indicated serious disaster. The unexpected boom in copper and zinc, however, resulted in a resumption of activities in February of the latter year. By April 1, practically all mines in the Butte district had reopened, and the output was being increased as never before. The continued demand and increased price of copper and spelter have resulted in the output being steadily increased from month to month, until approximately 22,000 men are now working in the Butte mines at the highest scale of wages ever paid in the quartz mining industry of the state.

The smelter and reduction plants at Butte, Anaconda and Great Falls are working at the extreme limit of their capacity, and a new zinc smelter and copper refinery were built during the year 1916 by the Anaconda company, adjacent to the big power plants recently completed at Great Falls.

The year 1916, says the State Mine Inspector, has proved the greatest from an industrial standpoint in Montana's history, and of all the varied industries, mining shows the greatest advance when the gross value of the output is considered Figures shown in his report are truly amazing. All records have been smashed in the production of minerals in Montana during the past year.

According to the State Mine Inspector, the copper production of the Treasure State by far exceeds the 300,000,000 pound mark. The zinc production amounts to about two-thirds (in pounds) of the copper production. Montana in 1916 has produced more silver than since the palmiest days when the white metal was selling above a dollar an ounce. The state is also a liberal producer of lead, while the gold output in 1916 was the best in years.

Two-thirds of the state's output comes from the Butte district. The pay-roll of this district is the largest in the world for a city of equal population. The Butte hill, upon and around which the remarkable mining district is established, has given to the world one thousand million dollars in copper ore, and it is estimated many times that quantity yet lies stored beneath the city's streets.

The solid foundation upon which the prosperity of the state's agricultural districts rests is attested by the huge crop production brought forth from the soil during this period. The season of 1915 was particularly favorable for the growing of all kinds of agricultural products, and the crop of that year will go down in the state's history as the most phenomenal and bounteous in the memory of the oldest inhabitants. While the season of 1916 has not been as favorable for the growing of small grains, resulting in a decreased yield, nevertheless a fair average crop has been harvested, except in a few sections, and sold at an unusually favorable price. With a tendency to diversification and development of the live-stock industry, particularly along lines of dairying and hog-raising, the agricultural districts are continuing to progress and grow apace.

There can be no doubt that in most lines of industry in the state a much better condition exists than for several years past. In some lines, notably in the copper mining industry, the improvement has been more substantial and marked than in others. Nevertheless, it is gratifying to feel that the state as a whole is enjoying more than a fair average of prosperity, with good prospects of its continuing for some time to come.

It is a matter of regret that the coal and lumber industries have not fully realized an equitable share in the resumption of activities and return of good times. For a number of years, the coal mines while working regularly have employed a comparatively small and reduced force. The development of huge hydro-electric power plants, the substitution of electricity for steam power in the mines and smelters, the electrification of the Butte, Anaconda & Pacific and 450 miles of the Chicago, Milwaukee & St. Paul railways in Montana have resulted in a decreasing demand for large quantities of coal. On the other hand, the large immigration of settlers into all parts of Montana is opening up a new market for coal heretofore unknown.

Despite these adverse conditions, according to the State Coal Mine Inspector, the extensive operation of the various railroads and extreme cold weather during the winter of 1915 and 1916 have given considerable stimulus to the industry throughout the state, the production of coal for the

past two years showing a noticeable gain. While the production in 1915 was about normal, the demand for coal during the past year was so great that the production of coal in 1916 increased more than 1.000,000 tons over 1915.

The Coal Mine Inspector's report for the past year shows that there has been an increase in the number of fatal accidents, as compared with the previous year. With reference to accidents, the report says:

"All accidents have occurred in the usual manner, mostly on account of falling coal and rock, or moving cars. At no time has there been an accident fatal to any great number of men, such as would be the result of an explosion of fire-damp. The coal mining industry of Montana is fortunate in not having to contend with large quantities of fire-damp, there being very little explosive gases generated by the coal mines in this state."

Concering the question of ventilation, the Coal Mine Inspector says:

"The most surprising feature noticeable in connection with the management of some of the mines, is the failure of the officials to avail themselves of the tools of modern science. These officials claim to be up-to-date and progressive in all that pertains to coal mining, and yet, on visiting their mines, the very first stopping examined shows that it was constructed in a very primitive manner, in many cases powder kegs and dirt being used. Stopping, simple and ordinary as it appears, is in reality the most important part of the development and maintenance of a coal mine.

"A number of complaints have been received at this office of lack of ventilation in some of the mines. On investigation of some of the complaints, the assertion is justified that there is much room for improvement in some of the mines. These conditions have not developed of late but have been in existence for a number of years. When these mines first opened, their trouble commenced and has existed since the time of their first cross-cut being put through. Under these conditions, with a careless foreman in charge, who not only neglects to stop up

the back cross-cut when the new cross-cut is finished, but who actually leaves from three to ten cross-cuts open in the different entries, is it to be wondered at that the ventilation is sluggish at the face of the workings in these mines?"

The past year has developed a much more active lumber market, and several mills which were closed a year ago have resumed operation. The continued cold weather and heavy fall of snow in the winter of 1915-16 were exceptionally favorable for logging operations, and much activity was shown by all logging concerns during the entire winter season. Notwithstanding some advance in the price of lumber at the mills, the rise has not been sufficient to equalize a situation which discriminates in favor of the lumber manufacturers of the Pacific Coast states. The situation, however, is full of promise for the immediate future. The continued influx of new settlers into eastern Montana, equipped with modern ideas of advancement, energy and improvement, who are building up prosperous new towns and counties, will give stimulus to this important industry by creating new markets for lumber in a territory heretofore but sparsely settled and practically undeveloped. Improvement in the industry would appear to be assured.

Turning aside from business and industrial conditions, a brief review of the work performed, as designated by legislative enactment, is necessarily in order and appropriate at this time. The fulfillment of these duties has been accomplished as far as possible under difficult and trying circumstances. The reduction of the original appropriation of \$2,000 for annual current expenses to \$1,000 was embarrassing, as the latter sum has been found insufficient for necessary office and traveling expenses. As a result some difficulty has been experienced in collecting statistics, the enforcement of labor laws, and in the matter of several investigations pertaining to the well-being and surrounding conditions of wage earners in various occupations, while the reduced appropriation made necessary the curtailment of the statistical part of this report.

The attention of the Department during the past two years has been largely occupied in the investigation of labor conditions and the collecting and assembling of statistics which it was expected would be used in this report. Considerable attention has also been paid to the administration of the workmen's compensation law, which became effective July 1, 1915. Realizing that this law would become a potent factor in the industrial and social life of the state, the Commissioner has endeavored to familiarize himself as far as possible with the practical workings and administration of the act. The new safety act incorporated and combined with the compensation law has also received a considerable portion of the Commissioner's time and attention. Of prime importance is this part of the law, which delegates to the Industrial Accident Board authority to compel employers to equip their plants with proper safeguards, as a means of preventing accidents in hazardous occupations.

While minor defects have been revealed in the law through practical operation, it has given in the main universal satisfaction, and few people could be found who would advocate a return to the old employer's liability system. Weak and ambiguous sections in the law, however, should and doubtless will be changed and corrected through amendment by the legislature this winter.

In conformity with a well established custom by various state labor bureaus of investigating food prices, a compilation has been made of the wholesale and retail prices of family consumption, arranged from returns received from dealers in all sections of the state. Sixty cities and towns are included in this tabulation, representing the identical communities covered by the previous report. Since the collection of these figures, however, there has occurred such an unprecedented increase in practically all commodity prices as to defeat the object sought to be attained when the price-lists were secured. They are accordingly omitted from this report.

Under the heading of "Smelting and Treatment of Ores," an article by Mr. E. P. Matthewson, late manager of the Washoe smelter at Anaconda, was secured and well illustrated. Owing to the importance of this industry, the exceptional qualifications and opportunities possessed by Mr. Matthewson for preparing this article, and because of the recognition accorded him as an authority on the subject, it was thought that this article would prove one of the interesting features of this report. Owing to lack of space, however, it is neces-

sarily omitted. Other articles prepared for this report, but which it was later found necessary to omit, are "Gold Dredging in Montana," "The Timber Industry," the "Production of Precious and Semi-Precious Stones," "Undeveloped Montana Industries," and descriptions of several special business enterprises which have attained a leading rank and standing among the diversified industries of Montana at this time.

It is a significant fact, and worthy of special mention, that sanitary conditions have improved wonderfully in all industrial plants, as compared with a few years ago. Good sanitary conditions with few exceptions prevail in all the important plants and workshops of the state. Practically all places are equipped with modern plumbing and good sewerage, and due regard is apparently had for the convenience, comfort and well being of employes. As a rule, these conditions are found in the plants of the larger corporations, which are alive not only to the importance of accident prevention, but realize the necessity of sanitary safeguards and sanitary regulations. Some of the essential features of good sanitation are still lacking in many of the smaller plants and institutions.

The big smelters, up-to-date saw mills, the beet sugar factory and other important concerns have installed sanitary drinking fountains throughout their plants, in place of ordinary drinking cups. Both quartz and coal mines are equipped with modern steam-heated change rooms with shower baths, and are maintained in all cases without charge to the men. Free baths are also provided by the larger lumber companies, both in their saw mills and logging camps. They are freely used and appreciated by employes, and their practical utility appears to be fully established. With few exceptions, owners and managers of large industrial plants are striving earnestly to improve the present situation and maintain a better standard of living and working conditions.

Realizing that the prevention of accidents is of prime importance, employers of labor have become impressed with the "safety first" movement, and are endeavoring to adopt effective means and methods for preventing injuries to their men. Even in the smaller plants, where formerly but little attention was paid to accident prevention, a noticeable improve-

ment has occurred in the equipment of mechanical safeguards tor the protection of employes in hazardous occupations.

The Montana compensation law, which incorporated a provision for safety inspection under the supervision of the Industrial Accident Board, has undoubtedly lessened accidents through the enforcement of regulations for covering and protecting dangerous machinery in plants and workshops heretofore deficient in means and devices for the safe-guarding of employes whose duties subject them to constant hazard from exposed and unguarded machinery. It is a gratifying fact that this work is being accomplished with little opposition from employers of labor. For the most part, companies are anxious to receive suggestions and to remedy all shortcoming that might result in causing accidents. While absolute immunity from injury is impossible, a large percentage are preventable, and if the necessary precaution could always be taken, it would result in reducing the liability of accidents to a minimum.

Two unusual and regrettable accidents occurred during the past two years, the most serious and deplorable in the history of the mining industry of the state. On October 16, 1915, a mine car containing 500 pounds of dynamite exploded at the mouth of the shaft of the North Butte Mining company, preparatory to being lowered to the underground workings of the mine. Seventeen men were instantly killed by this accident, and two others were seriously, although not fatally, injured.

February 14, 1916, witnessed another unusual accident in Butte as a result of a fire which started from unknown causes in the Pennsylvania mine, owned by the Anaconda Copper Mining company, and one of the largest and best producers in the Butte district. Twenty-one men lost their lives in this fire, being suffocated by gas and smoke. On November 6, 1889, nine men lost their lives in a similar fire which started in the St. Lawrence mine. The fire begun then has been burning ever since. It has been constantly eating its way through the sulphur ore for 27 years, but is kept confined by bulkheads of concrete.

Notwithstanding prompt and diligent inquiry and investigation which was instituted by government, state and county officials, the cause of neither accident has ever been definitely determined.

The conditions of labor during the past two years have been very satisfactory and encouraging. It is no exaggeration to say that employment at fair wages has been more continuous and abundant than for many years. Definite and conclusive evidence that such is the case is furnished by the vast amount of development and construction work which was begun and completed during the period covered by this report. Millions of dollars have been spent in this period by the Montana Power company in building dams and constructing huge power plants in the Missouri and Clark's Fork rivers, and in the electrification of the Milwaukee railroad. From two to four million dollars has been expended by the Mountain States Telephone and Telegraph company, covering the same length of time, in the reconstruction of old lines and in new development work. The Great Northern. Northern Pacific and Milwaukee railroads have extended their lines into new territory heretofore without railroad transportation and facilities. The copper smelters at Anaconda and Great Falls have been remodeled and practically rebuilt to conform to modern ideas and invention in metallurgical development. The erection of a copper refinery and zinc smelter at Great Falls is another permanent addition to Montana's growing industries and indicates to some extent the prosperity which has attended Montana's industrial activities.

And these are only the important factors in the state's advancement, which are mentioned to show that an increased and enlarged demand for labor has occurred during the past two years.

Consideration is again requested of the legislative assembly for several important measures recommended by the Department in its biennial report published two years ago.

The Department desires to renew its former recommendation for the passage of an act providing for the prompt payment of wages. What is wanted is a simple and expeditious method of collecting wages without formalities or technicalities. Nothing has better demonstrated the need for such legislation than the many complaints received at this office during the past four years.

Conditions revealed through investigation made by the Department as a result of numerous complaints filed by persons who have been victimized by unscrupulous employment agents, furnish additional and conclusive evidence that the most stringent legislation is necessary to protect workmen against misrepresentation and fraudulent abuses of this nature. Some rigid regulation for private employment agencies should be provided in this state, and a method devised for the punishment of agents who make fraudulent misrepresentation or fail to live up to the contract made with the men. The Department believes that the best method of regulating these abuses is to abolish all employment offices conducted for profit.

It would greatly facilitate the work of the Department if the legislature passed an act compelling county and municipal officials to respond promptly to questions asked for statistical information.

Serious objection has been raised among the wage earners of the state over the deduction from their earnings for road and poor taxes and hospital fees. Complaints have been numerous the past season in connection with the system of collection which admits of a number of abuses. Some better method of collecting these fees other than the present arbitrary deduction upon demand by the various county assessors should be devised if possible.

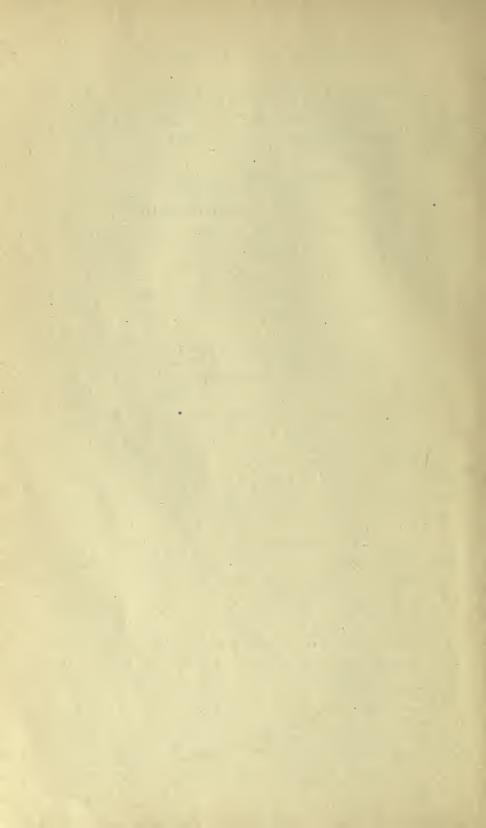

The usefulness of the Department has been seriously handicapped during the past two years, as a result of the reduction from \$2,000 to \$1,000 in the annual appropriation made by the Fourteenth Legislative Assembly for office and traveling expenses. If the Department is to be of material service to the wage earners of the state, it is important and necessary that sufficient funds be available for carrying on the work contemplated in the original act passed, establishing a labor department and defining its functions and purposes. It will readily be seen that the present appropriation of \$2,000 is insufficient to meet the requirements of the office covering a two years' period. It is sincerely hoped the next legislature will realize the importance of giving due consideration to the above suggestion and restore the original appropriation of \$2,000 a year to the Department.

Acknowledgment is again made of the faithful and efficient services rendered by Col. W. R. Baker, Chief Clerk, and Miss Mary A. Stokes, Stenographer. Both have been faithful and diligent, and the character of their work merits special mention.

Respectfully submitted,

W. J. SWINDLEHURST,

Commissioner.

Manufacturing in Montana.

The following chapter consists of a tabulation of statistics relating to the manufacturing industries of the state. Although Montana is comparatively unimportant as a manufacturing community, it will be seen from the figures herewith given, that manufacturing operations carried on during the last biennial period, when taken as a whole, have contributed a considerable proportion to the net wealth created by the state.

A comparison of these tables with the returns published in the last biennial report of this Department brings out the fact that the manufacturing industries of Montana have shown a considerable growth during a two years' period from December 1, 1914, to December 1, 1916. When compared with the United States census returns for 1909, the growth in the number of establishments and the increase in production and the number of wage earners employed will show figures that are little short of amazing.

The investigations made by the Department embrace saw mills, planing mills, logging operations, breweries and bottling works, flour mills, butter creameries, cheese factories, brick and clay factories, cigar makers, meat packers and important slaughtering plants, steam laundries, monumental works, drug manufacturers, foundries, repair and machine shops and manufacturing institutions supplementary to mining interests for the treatment of minerals and ores.

TABLE NO. 48-SUMMARY.

Total number of various classes of men employed in and around the coal mines of Montana, together with the production, value of coal, kegs of powder used and per cent of fatal and non-fatal accidents per one thousand men employed for the years 1915 and 1916.

	1915	1916
Mines reported as producing	60	59
Machine operators employed	183	199
oaders employed	717	936
diners employed	1,162	1,252
nside daymen employed	801	864
Outside daymen employed	536	583
Total number men employed	3,399	3,834
Cons produced per man, per day	4.1	4.
Total tonnage	2,697,054	3,688,307
otal value	\$4,285,146	\$5,899,355
Tons produced per life lost		194,121
Cons produced per serious accident		62,514
Ien employed per fatal accident	340	202
den employed per non-fatal accident	77	65
Per cent killed per 1,000 men	2.9	4.
Per cent seriously injured per 1,000	$\frac{13}{44.354}$	15
Number kegs powder used		64,372
Cons coal mined by machine		1,887,116
Cons coal mined by hand	52	1,801,191
Per cent of coal mined by hand	48	49
Total number of lives lost	10	19
Otal number seriously injured	44	59
